

Accessing the myHDSB portal from your Mac

Updating Java:

Open your web browser and go to <https://www.myhdsb.ca>. If you're presented with the following screen, then you'll need to update Java on your Mac.

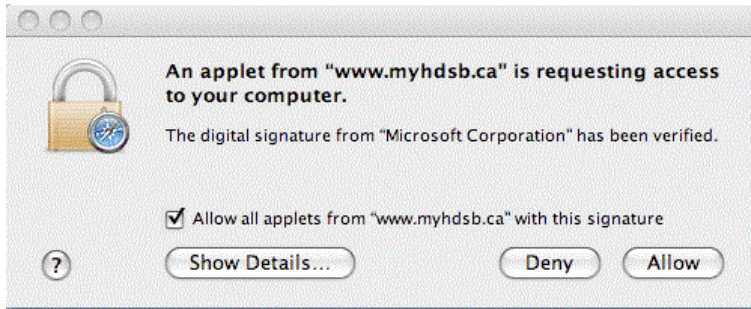

From your desktop, click on the Apple icon  and select **Software Update**. If a Java update is available, ensure it is selected and then click on the **Install Item** button.

Accessing the myHDSB portal after Java update

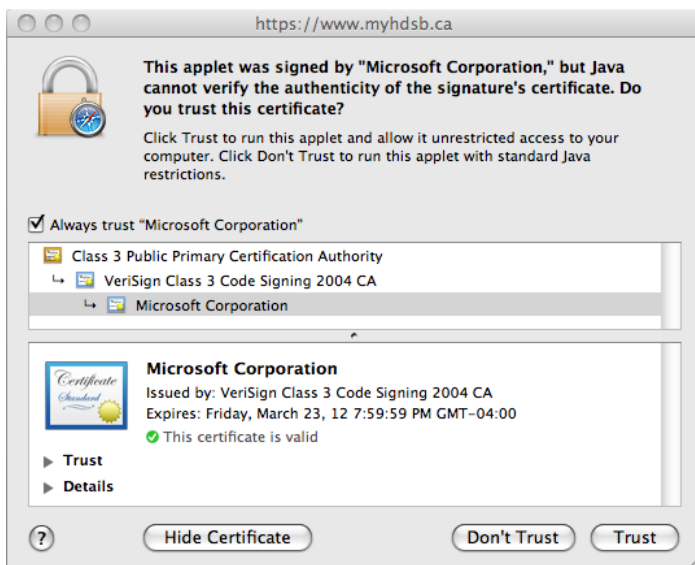

Once you've updated Java, open a web browser and navigate back to: <https://www.myhdsb.ca>

Depending upon what version of OS X and Java you have installed, as well as your security settings, you should receive one of the following prompts:

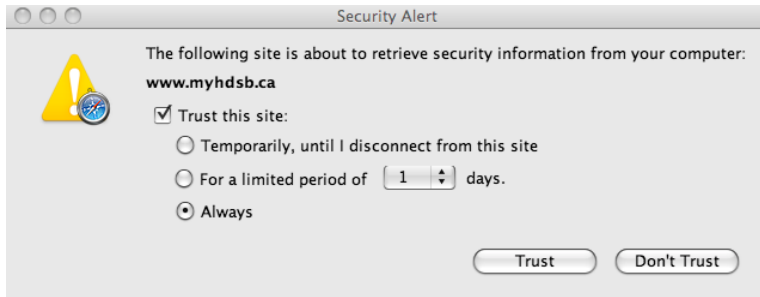

If available, click on the box next to “**Allow all applets...**” then click on **Allow** or **Trust** depending upon which prompt you get.

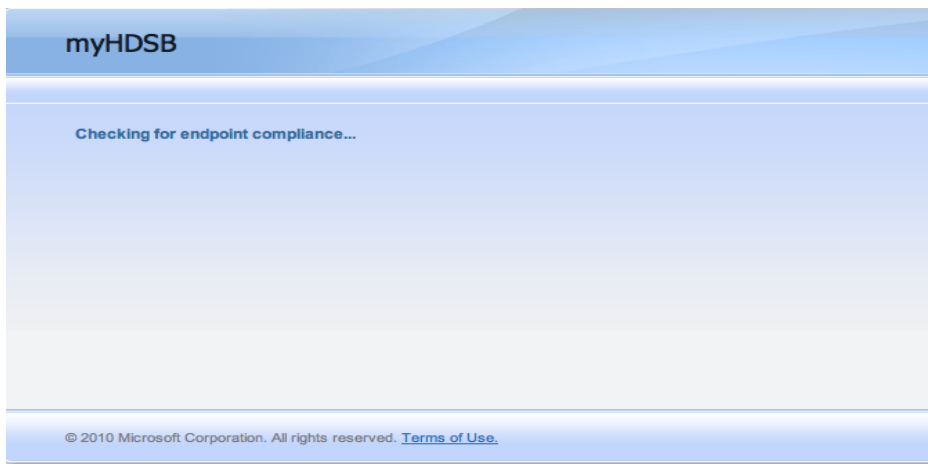

*Note that if you click on **Show Certificate**, you will get the option to select **Always Trust** “**Microsoft Corporation**” however you will be required to enter Administrative credentials

Next, you'll receive another prompt, asking you to choose whether or not to trust the site. Click in the box next to **Trust this site:** and choose **Always**, then click on **Trust**

The system will then run an **endpoint compliance check**, which may take a minute or two.

Once that completes, enter your IHDSB network **User name** and **Password** and click on the **Log On** button
