# Engaging in Parents in Learning through Technology

This session will explore the important role that parents play in the 21st century classroom with the goal of empowering families as partners in learning through technology. We will investigate the role of parent voice in creating supportive resources that close the gaps between student, parent and teacher understanding.

Project Description:

The Technology Help Desk is a collaborative project between students and teachers to share their knowledge around TECHNOLOGY with the world. Students and Teachers work side by side to produce videos and checklists to help all technology users develop their understanding. Ideally, this will support parent, teacher and student learning about the many ways TECHNOLOGY can help us.
